

# CHECKMATE PRINT HEAD

Solving The CIJ  
Inspection Challenge

# CHECKMATE PRINT HEAD

## WHO WE ARE

The CheckMate™ Vision line of label verification systems are developed and manufactured by ClearView Imaging Ltd, a machine vision specialist based in Oxfordshire, UK.

## A NEW APPROACH TO READING CONTINUOUS INKJET PRINTED TEXT

CheckMate Print Head has been developed to complement the growing use of continuous ink-jet (CIJ) printing, offering far superior and accurate character/string recognition rates than current code vision systems.

CheckMate Print Head does not use pre-processing. Its patented algorithm is capable of discerning individual characters – even partially printed ones – with far more accuracy, resulting in higher quality levels, improved confidence in the printed information, low spurious faults and greater peace of mind for the end-customer supermarkets

## KEY BENEFITS

- Simple and easy to use
- Strings can be Set to Various Formats
- Strings can be Constrained
- Save Images

- Mirrors Set-Up Flow and Options of Standard CIJ Printers
- Inspect and Read/Verify One or Multiple Lines of Text
- Save and Export Results

# CHECKMATE PRINT HEAD

## EASY INTEGRATION ON TO EXISTING PRODUCTION LINES

## THE CORE ALGORITHM

- Unique patented technology designed for reading/verifying dot matrix text
- Unlike other traditional OCR methods used to solve dot matrix OCR, no pre-processing required
- Easy to use, simply specify dot size and the area to read

Robust to irregular type, background and illumination

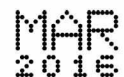

Handles rotated text

Supports user-defined fonts, predefined fonts and constraints

MAR 2016

Recognises punctuation marks, blank spaces and multiple lines
